GITTERBOX

1200x800

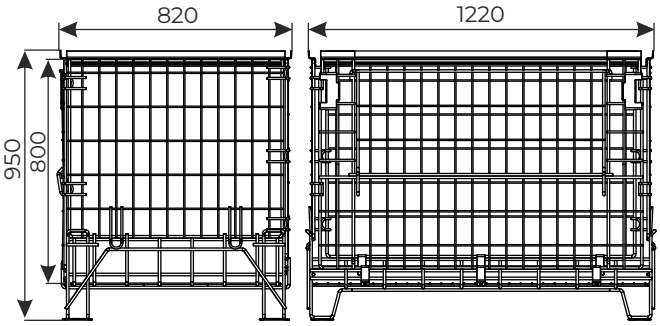

This pallet gitterbox is a full value product, making it possible to store and transport loose goods, without using euro pallets.

Metal feet allow the box to be lifted up by a fork-lift and also facilitate cleanliness in the warehouse.

During transportation, it is possible to stack two of these boxes, one on the other (total height of 1900mm), allowing for optimal utilization of the vehicle's cargo carrying capacity.

The ability to place substantial loads within a single box means that it is not only useful as a box for loosely packed lightweight goods, but also as a stable system for organizing heavier products within a small amount of floor space, maintaining easiness of their movement.

DIMENSIONS:

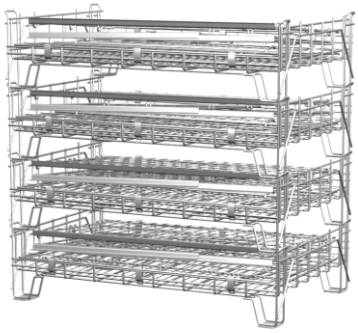

A half-open frame on the front wall allows for easy access to the goods stored inside the box.

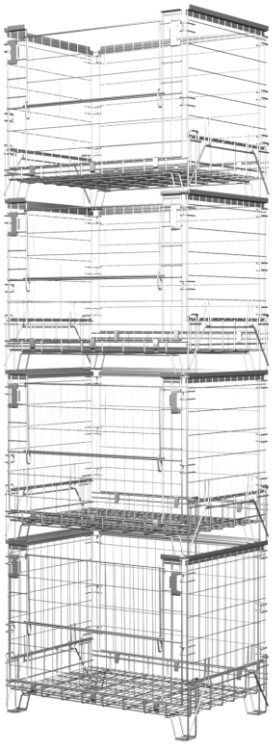

Its small dimensions after folding means that when a gitterbox is not being used, it does not take up unnecessary warehouse space.

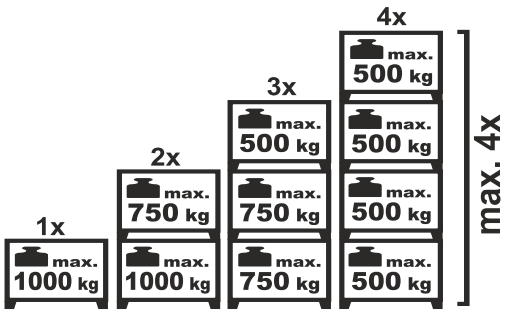

The ability to stacking up to four gitterboxes (pallet container and the pallet) and reducing to 1/4th the warehouse floor space necessary to store the same quantity of goods.

PARAMETERS:

Technical data: The gitterbox is made of steel wires (spot welded mesh). From the top, it is finished with z-profiles. On front side it has a half-opened frame.
